Art Unit 1711

Applicant's election of Group I and the species of hyperbranched polyureas as the species of hyperbranched polymer; the hydrosilyl group as the species of functional group for the hyperbranched polymer and linear polymers as the second type of polymer in Paper No. 3 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claims 3 and 15 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicants regard as the invention.

The term "alpha,omega-telechelic" makes no sense in the context of claims 3 and 15 since claims 3 and 15 do not recite what alphaomega pertains to.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) The invention was described in (1) an application for patent, published under Section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the

Art Unit 1711

international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-5, 11-17, 23 and 24 are rejected under 35 U.S.C. § 102(e) as being anticipated by Heilmann et al. (U.S. 2003/0096908, United States Patent Application Publication).

Note paragraphs 144 and 198 (i.e. Example 64 which also refers to Example 1) in which a hyperbranched oligomer is blended with a linear oligomer both of which contain coreactive groups. Note claim 1 of the application publication which also discloses the reaction of dendritic polymers and an oligomer containing coreactive pendant groups.

Claims 1-5, 11-17, 23 and 24 are rejected under 35 U.S.C. § 102(e) as being anticipated by Gaddam et al. (USP 6,448,337).

Note claim 1 of the patent which claims a composition comprising two components including a dendritic polymer containing coreactive groups with one of the oligomeric components. Note Examples 7-15 described in paragraphs 147-149 for reaction of dendrimers and linear polymers containing coreactive groups.
